

Covid-19 On-Site Testing Services

Risk Reduction to optimize workforce health, safety, and operational stability.

Mobile Medical Corporation has been working to keep employees safe for decades. We are pleased to provide COVID-19 testing on-site at your workplace to help mitigate the risk of unknowingly exposing your jobsite / office to the coronavirus.

Tests Available Include: Point of Care (POC) and Laboratory-Based

Each test option has unique features and varying results. Please review with your MMC representative when selecting the best testing method for your workforce.

- **Point of Care:** CareStart COVID-19 Antigen Test (Nasal Swab)
- **Point of Care:** IgM/I/gG Antibody Rapid Test (Capillary Blood) Finger prick
- **Lab Analysis:** RT-PCR COVID-19 Test - Mid-nasal swab molecular testing.

Nasal Swab COVID-19 Antigen POC Test: Proven to detect all known COVID variants, including DELTA

- Test should be collected within five days of symptoms onset or in individuals without symptoms or other epidemiological reasons
- Positive results indicate the presence of viral antigens, but other diagnostic information is necessary to determine infection status.
- Positive results do not rule out a bacterial infection or co-infection with other viruses.
- Negative results should be considered in context of a patient's recent exposures, history and the presence of clinical signs and symptoms consistent with COVID-19.
- Test results are interpreted in 10 minutes

Capillary Blood COVID-19 Antibody POC Test:

- The test is designed to be administered by medical professionals
- Will detect antibodies 5-7 days after symptoms first appear
- Test results are interpreted in 15 minutes

RT-PCR COVID-19 Test:

- RT-PCR tests identifies all known global variants and mutated strains of COVID-19
- Omega Laboratories based in Mogadore, OH (Eastern Time Zone) is CLIA certified
- Patients tested for active infection using nasal mid-turbinate swab collections
- Results available within 8-26 hours of arrival at lab, with most samples reporting the same day received

Please note: the POC tests can identify COVID-19 virus as well as bacterial infections or co-infection with other viruses. The PCR confirmation will only identify COVID-19, therefore some results could be reversed to negative if the Covid virus is not detected.
